

# Our service: your benefits

We have found that in reality there are often significant differences in the knowledge of the planning and executing parties. The success of a project depends very much on experience and knowledge. That is why we want to be there for you from the initial concept to completion and beyond for further maintenance work.

02

01

**CONSULTING**  
from the very first ideas we are on the side in an advising function.

03

**PROGRAMMING**  
ISYGLT is powerful and allowed most differentiated settings, e.g. dynamic area divisions for exhibition halls. We see that it is the best if someone is doing that who knows how.

04

**COMMISSIONING**  
An eye for detail and a high level of analysis capability are the hallmarks of our system engineers.

05

## **DOCUMENTATION**

Our ISYGLT modules are extremely durable. Therefore we document everything very precisely. Thus your control system can be effectively adapted even after many years.

## **MAINTENANCE**

Whether by remote maintenance or on site. An optional maintenance contract provides additional security for your business-critical processes.
